Application Title: *An Angular Deflection Apparatus for use in Confined Spaces and Method of Use*
Docket Number: Loeb.M-04

PRELIMINARY AMENDMENT

Sir:

Please amend the claims as shown below. The added matter in this amendment finds antecedence in the specification as filed, on page 5, lines 24 and 25.

In the Claims:

1. (original) An apparatus comprising: a means for affecting tissue, the tissue affecting means disposed within a first enclosure having a preferred shape; the first enclosure disposed within a second enclosure and thereby constrained to the shape of the second enclosure, the second enclosure being more rigid than the first enclosure; the first enclosure free to translate within the second enclosure, thereby extending from the second enclosure to assume the preferred shape so as to move proximate a tissue surface.
2. (currently amended) The apparatus of claim 1 wherein the means for affecting tissue is at least one of a burr, a rotating guillotine, a source of fluid under elevated pressure, a cryogenic fluid, and a source of wave energy.
3. (original) The apparatus of claim 1 wherein the first enclosure is a tube having a proximal end portion and a distal end portion.
4. (original) The apparatus of claim 1 wherein the second enclosure is a constraining sleeve.
5. (original) The apparatus of claim 3 wherein the distal end portion of the tube is made of a superelastic memory metal alloy treated to assume the preferred shape after being deformed therefrom.
